Linear Algebra for Computational Sciences and Engineering Ferrante Neri

This book presents the main concepts of linear algebra from the viewpoint of applied scientists such as computer scientists and engineers, without compromising on mathematical rigor. Based on the idea that computational scientists and engineers need, in both research and professional life, an understanding of theoretical concepts of mathematics in order to be able to propose research advances and innovative solutions, every concept is thoroughly introduced and is accompanied by its informal interpretation. Furthermore, most of the theorems included are first rigorously proved and then shown in practice by a numerical example. When appropriate, topics are presented also by means of pseudocodes, thus highlighting the computer implementation of algebraic theory.

It is structured to be accessible to everybody, from students of pure mathematics who are approaching algebra for the first time to researchers and graduate students in applied sciences who need a theoretical manual of algebra to successfully perform their research. Most importantly, this book is designed to be ideal for both theoretical and practical minds and to offer to both alternative and complementary perspectives to study and understand linear algebra.

From reader reviews:

James Brier:

Nowadays reading books are more than want or need but also be a life style. This reading routine give you lot of advantages. The benefits you got of course the knowledge your information inside the book that will improve your knowledge and information. The details you get based on what kind of publication you read, if you want get more knowledge just go with education books but if you want truly feel happy read one along with theme for entertaining such as comic or novel. The particular Linear Algebra for Computational Sciences and Engineering is kind of publication which is giving the reader unforeseen experience.

Ismael Black:

A lot of people always spent their very own free time to vacation or perhaps go to the outside with them family or their friend. Did you know? Many a lot of people spent they free time just watching TV, or even playing video games all day long. If you need to try to find a new activity that is look different you can read a new book. It is really fun in your case. If you enjoy the book that you read you can spent 24 hours a day to reading a guide. The book Linear Algebra for Computational Sciences and Engineering it is very good to read. There are a lot of people that recommended this book. They were enjoying reading this book. In case you did not have enough space to bring this book you can buy the actual e-book. You can m0ore effortlessly to read this book out of your smart phone. When you read textbooks, you can improve your knowledge, due to the fact book has a lot of information into it. The information that you will get depend on what types of book that you have read. In order to get information about your research, you can read education books, but if you act like you want to entertain yourself you can read a fiction books, these us novel, comics, and also soon. The Linear Algebra for Computational Sciences and Engineering will give you a new experience in examining a book.

Mary Wines:

In this age globalization it is important to someone to find information. The information will make professionals understand the condition of the world. The healthiness of the world makes the information much easier to share. You can find a lot of referrals to get information example: internet, paper, book, and soon. You can view that now, a lot of publisher which print many kinds of book. The book that recommended to you is Linear Algebra for Computational Sciences and Engineering this reserve consist a lot of the information in the condition of this world now. This particular book was represented how does the world has grown up. The language styles that writer value to explain it is easy to understand. The actual writer made some analysis when he makes this book. This is why this book ideal all of you.
