Space Vehicle Design Criteria Archive: 1964-1979 (Library of Flight)

The AIAA Space Transportation Technical Committee is pleased to present this archive of the NASA Space Vehicle Design Criteria project that was conducted in the late 1960s through the early 1970s. It was originally conducted in a time frame when the manned Mercury and Gemini space flight programs had been completed, the Apollo program was nearing its end, and the Space Shuttle program that was to be the prime focus of NASA space transportation system was in its infancy. Satellites had been launched and recovered for over ten years and the great interplanetary voyages had been begun. This wide ranging series of monographs was originally developed to provide a uniform basis for the design of flightworthy space vehicles. They summarized the significant experience and knowledge that had been accumulated in research, development, and operational programs by that time. They were intended to be used as guidelines, not requirements, in space vehicle design and development. The documents are divided into four categories: Chemical Propulsion (35 documents); Environment (26 documents); Guidance and Control (21 documents); and, Structures (46 documents). Each monograph summarizes the then state of the art in design practices and identifies important aspects of the state of technology for the particular subject being assessed. Each go on to state what rules, guides, or limitations must be imposed to ensure flightworthiness - these criteria could then serve as a checklist for guiding a design or assessing its adequacy. Now, more than thirty years from the original project's work, these monographs provide a unique historical introspection of the broad state of the art in space vehicle design of that time. While the technology in nearly every field has advanced many fold, the actual physics behind each topic has not changed. By applying uniform criteria across the board to the new systems that must be developed over the next years, those systems can be made more reliable and resilient in their journeys though space to wherever mankind's imagination leads us in the future.

From reader reviews:

Gregory Howard:

As people who live in the modest era should be revise about what going on or information even knowledge to make these individuals keep up with the era and that is always change and move ahead. Some of you maybe will certainly update themselves by studying books. It is a good choice for you but the problems coming to you is you don't know which you should start with. This Space Vehicle Design Criteria Archive: 1964-1979 (Library of Flight) is our recommendation to make you keep up with the world. Why, because book serves what you want and need in this era.

Theresa Smith:

This Space Vehicle Design Criteria Archive: 1964-1979 (Library of Flight) is great guide for you because the content and that is full of information for you who have always deal with world and also have to make decision every minute. This book reveal it information accurately using great arrange word or we can point out no rambling sentences inside it. So if you are read this hurriedly you can have whole facts in it. Doesn't mean it only provides straight forward sentences but challenging core information with splendid delivering sentences. Having Space Vehicle Design Criteria Archive: 1964-1979 (Library of Flight) in your hand like obtaining the world in your arm, info in it is not ridiculous 1. We can say that no publication that offer you world within ten or fifteen tiny right but this book already do that. So , this is good reading book. Hey there Mr. and Mrs. active do you still doubt in which?

Thomas Paine:

You may get this Space Vehicle Design Criteria Archive: 1964-1979 (Library of Flight) by visit the bookstore or Mall. Only viewing or reviewing it might to be your solve issue if you get difficulties for ones knowledge. Kinds of this reserve are various. Not only by means of written or printed but also can you enjoy this book simply by e-book. In the modern era similar to now, you just looking of your mobile phone and searching what your problem. Right now, choose your own personal ways to get more information about your reserve. It is most important to arrange yourself to make your knowledge are still revise. Let's try to choose proper ways for you.

Jean Fair:

As a scholar exactly feel bored in order to reading. If their teacher requested them to go to the library or to make summary for some guide, they are complained. Just very little students that has reading's heart or real their pastime. They just do what the instructor want, like asked to go to the library. They go to right now there but nothing reading really. Any students feel that reading through is not important, boring in addition to can't see colorful photographs on there. Yeah, it is being complicated. Book is very important in your case. As we know that on this time, many ways to get whatever we would like. Likewise word says, many ways to reach Chinese's country. Therefore , this Space Vehicle Design Criteria Archive: 1964-1979 (Library of Flight) can make you experience more interested to read.
