Techniques of Event History Modeling: New Approaches to Casual Analysis

Hans-Peter Blossfeld, G"tz Rohwer

Techniques of Event History Modeling: New Approaches to Casual Analysis Hans-Peter Blossfeld, G"tz Rohwer

Including new developments and publications which have appeared since the publication of the first edition in 1995, this second edition:

- *gives a comprehensive introductory account of event history modeling techniques and their use in applied research in economics and the social sciences;
- *demonstrates that event history modeling is a major step forward in causal analysis. To do so the authors show that event history models employ the time-path of changes in states and relate changes in causal variables in the past to changes in discrete outcomes in the future; and
- *introduces the reader to the computer program Transition Data Analysis (TDA). This software estimates the sort of models most frequently used with longitudinal data, in particular, discrete-time and continuous-time event history data.

Techniques of Event History Modeling can serve as a student textbook in the fields of statistics, economics, the social sciences, psychology, and the political sciences. It can also be used as a reference for scientists in all fields of research.
