## **Probing the Atom** Mark P. Silverman

The many-faceted efforts to understand the structure and interactions of atoms over the past hundred years have contributed decisively and dramatically to the explosive development of physics. There is hardly a branch of modern physical science that does not in some seminal way rely on the fundamental principles and mathematical and experimental insights that derive from these studies. In particular, the drive to understand the singular features of the hydrogen atom--simultaneously the archetype of all atoms and the least typical atom--spurred many of the twentieth century's advances in physics and chemistry. This book gives an in-depth account of the author's own penetrating experimental and theoretical investigations of the hydrogen atom, while simultaneously providing broad lessons in the application of quantum mechanics to atomic structure and interactions.

A pioneer in the combined use of atomic accelerators and radiofrequency spectroscopy for probing the internal structure of the hydrogen atom, Mark Silverman examines the general principles behind this far-reaching experimental approach. Fast-moving protons are directed into gas or foil targets from which they capture electrons to become hydrogen atoms moving uniformly at very high speeds. During their rapid passage through the spectroscopy chamber of the atomic accelerator, these atoms reveal by the light they emit fascinating details of their internal configuration and the interactions that created them. Silverman examines the effects of radiofrequency fields on the hydrogen atom clearly and systematically, explaining the details of these interactions at different levels of complexity and refinement, each level illuminating the physical processes involved from different and complementary perspectives.

Readers interested in diverse areas of physics and physical chemistry will appreciate both the theoretical and practical implications of Silverman's studies and the personal style with which he relays them. This is a work of not only an outstanding research physicist, but a fine teacher who understands how curiosity underlies all science.

### From reader reviews:

#### Eric Graves:

Book will be written, printed, or highlighted for everything. You can understand everything you want by a publication. Book has a different type. As you may know that book is important factor to bring us around the world. Alongside that you can your reading talent was fluently. A book Probing the Atom will make you to possibly be smarter. You can feel considerably more confidence if you can know about almost everything. But some of you think that open or reading a new book make you bored. It's not make you fun. Why they could be thought like that? Have you in search of best book or acceptable book with you?

#### Tatum Martin:

What do you concerning book? It is not important together with you? Or just adding material when you need something to explain what you problem? How about your free time? Or are you busy particular person? If you don't have spare time to perform others business, it is give you a sense of feeling bored faster. And you have spare time? What did you do? All people has many questions above. They must answer that question due to the fact just their can do in which. It said that about book. Book is familiar in each person. Yes, it is suitable. Because start from on pre-school until university need this specific Probing the Atom to read.

#### Derick Heinz:

Now a day those who Living in the era exactly where everything reachable by talk with the internet and the resources within it can be true or not need people to be aware of each info they get. How individuals to be smart in getting any information nowadays? Of course the answer then is reading a book. Reading a book can help men and women out of this uncertainty Information specially this Probing the Atom book because book offers you rich details and knowledge. Of course the information in this book hundred per cent guarantees there is no doubt in it everbody knows.

#### Clarence Cavins:

Spent a free time and energy to be fun activity to complete! A lot of people spent their spare time with their family, or their particular friends. Usually they undertaking activity like watching television, planning to beach, or picnic inside park. They actually doing same every week. Do you feel it? Do you wish to something different to fill your own personal free time/ holiday? Can be reading a book could be option to fill your free time/ holiday. The first thing that you ask may be what kinds of e-book that you should read. If you want to try look for book, may be the reserve untitled Probing the Atom can be good book to read. May be it could be best activity to you.
