## **Live Pterosaurs in America: Not extinct, flying creatures of cryptozoology that some call pterodactyls or flying dinosaurs or prehistoric birds** Jonathan David Whitcomb

Encounter eyewitness accounts of living pterosaurs in the United States. Live "pterodactyls?" In the United States? Many scientists have long assumed all pterosaurs died millions of years ago. Now take a whirlwind tour of many years of investigations in cryptozoology, and prepare for a shock: At least two species of pterosaurs have survived, uncommon, not so much rare as widely, thinly distributed.

Nocturnal pterosaurs have always lived among us, but hidden by something. Enter now the realm of a new branch of cryptozoology, a branch overshadowed by the dogma of a "universal extinction." How did scientists miss living pterosaurs? Get the answers here, hidden secrets about how these amazing flying creatures of the night have gone mostly unreported: Until recently, almost nobody would listen to eyewitnesses; but for the past seven years many of them have been interviewed by the author of this book.

Many modern pterosaurs are much larger than any bat, many with long tails, many with head crests. What about news headlines? How did these creatures avoid media attention? Get the answers from years of work by American cryptozoologists.

The old "fruit bat" explanation for reports of pterosaurs in Papua New Guinea--that bat idea has now been shot down; the tail length of the larger *Rhamphorhynchoid*-like flying creatures has been estimated at a minimum of ten feet and a maximum of over twenty feet. More shocking, these giant long-tailed flying creatures are not confined to the southwest Pacific: They are seen in the contiguous United States of America. Most pterosaurs in North America, however, are smaller, with many wingspan estimates at less than fifteen feet; nevertheless, how shocking!

What amazing encounters! In California, New Mexico, Texas, Arkansas, Florida, South Carolina, Pennsylvania, Ohio, and many other states, eyewitnesses have seen strange featherless creatures flying overhead. These are not bats; most have long tails and are bigger than any bat. Dive into eyewitness testimonies; compare sightings through the author's detailed analysis. Third edition, nonfiction.
